# Migrate To Mac OS X

## 1. Open your mind

Apple has worked hard to make the transition from Mac OS 9 to Mac OS X as smooth as possible. However, it helps if you realize Mac OS X is not Mac OS 9 with new features. Mac OS X is an entirely new operating system with entirely new features. You'll soon wonder how you ever worked without it.

## 2. Prepare

An entirely new operating system benefits from entirely new software and hardware. Forget Computers recommends you evaluate the software you use and upgrade to Mac OS X native versions immediately upon migrating. Most Macintosh applications available today will run unmodified on Mac OS X, however non-native Mac OS X applications will not take advantage of Mac OS X features such as memory protection or multitasking. Your Mac OS X migration will also be much more pleasant if you use a G4 with at least 640MB of RAM; a large hard drive (40GB or greater); and a video card that can generate a screen resolution of at least 1024 x 768.

One way to begin your migration is to install Mac OS X on a shared computer. Take advantage of the multi-user interface and allow everyone in the office to have his or her own account. Or you could first run Mac OS X on an administration or web-design workstation, rather than a print-design workstation as this may be less disruptive to your workflow should any issues arise.

## 3. Forget Computers. Get Creative.

Forget Computers has been helping creative professionals deal with font, color, application and workflow issues since Mac OS 7! Make your migration a smooth one. Contact Forget Computers today for help getting started with Mac OS X.

### Forget Computers, Ltd.

Super-cool technical solutions for super-anal creative professionals.
